Stereo

VS CODE EXTENSION

Your Markdown Runs Now.

Stereo is a VS Code extension that makes code blocks executable. Write standard .md files, see live dashboards, API health, and runbooks — all inline. Open source, zero lock-in.

UNDER THE HOOD

Five modules that make markdown executable.

Each one handles a different part of the pipeline — from parsing your .md to rendering live output inline.

MARKDOWN PARSING
PARSER
Extracts ```lang run blocks from standard markdown with zero config.

LIVE OUTPUT
RENDERER
Renders live output inline with OKLCH-themed dashboard components.

ISOLATION
SANDBOX
Executes code in a restricted VM with no access to fs or process.

HTTP PROXY
SIDECAR
Proxies HTTP and injects secrets so credentials never touch JS.

UI LIBRARY
COMPONENTS
Ships MetricCard, Sparkline, StatusTable, and DashGrid built-in.

HOW IT WORKS

Three steps. No build system.

Standard markdown in, live dashboards out. Nothing to configure.

1. **Write Markdown**
Create a standard .md file. Annotate code blocks with ```tsx run. That's the only syntax Stereo adds.

2. **Open Preview**
Press Ctrl+Shift+M. Stereo renders your markdown with live output areas alongside each executable block.

3. **Run Blocks**
Click Run or set auto-refresh. See dashboards, API data, and charts rendered inline — no terminal needed.

Auto-refresh built in. Set `refresh=30s` on any block. Data stays current without manual reruns.

WHAT YOU GET

Everything you need, nothing you don't.

Built for developers who write markdown every day and wish it did more.

Zero Lock-in
Files stay .md. Works with git, GitHub, GitLab. No proprietary format.

Live Dashboards
MetricCard, Sparkline, StatusTable render inside your editor.

Secret Injection
Rust sidecar replaces {{env.X}} — JS never sees your API keys.

Auto-Refresh
Set refresh=30s on any block. Data stays current without reruns.

VS Code Native
CustomTextEditorProvider, not a new app. Your keybindings work.

Open Source
MIT licensed. Inspect every line. Self-host the sidecar.

18
Unit tests passing
Parser + env watcher fully tested with Vitest.

337KB
Webview bundle
React 18 + markdown-it + 5 components, production-minified.

0ms
Cold start
No server, no cloud — runs locally in VS Code.
